Software Engineer

23

*February 7, 2025*

from Tan Karageldi

I'm currently in my last year at Mount Allison University working on my Bachelor of Science, majoring in Computer Science and minor in mathematics. I aspire to be a Software / Machine Learning Engineer, and I'm excited to learn more about the evolving AI world and bring new horizons to it.

I would like to believe that I have a creative soul, I write some code to make those ideas become reality. Learning has always been a passion for me, I'm always in search of knowledge, on any topic that can contribute to my personal growth. I like creating websites, games, and solutions to interesting problems using my knowledge in various programming languages. I am determined and motivated to succeed in everything I do, and I try to enjoy every day of the journey. Currently, I am spending my time working freelance creating websites for local clients in my city, contributing to Web3 projects on Solana, and learning about machine learning and artificial intelligence and building an AI application for efficient betting on NBA games.

All the projects I made can be found on the education and projects section of this website. Feel free to reach out to me at [karagelditan@gmail.com](mailto:karagelditan@gmail.com)

Thank you.
